Sample Questions and Expert Solutions

- Calculating the Area of a Rectangle

Question:

A rectangle has a length of 8 cm and a width of 3 cm. What is its area?

Expert Answer:

The area (A) of a rectangle is calculated by multiplying its length (L) by its width (W) :

$$[A = L \times W]$$

Plugging in the values:

$$[A = 8\text{,cm} \times 3\text{,cm} = 24\text{,cm}^2]$$

Understanding the formula for rectangle area is fundamental. The solution demonstrates direct application, emphasizing the importance of units and multiplication skills.

- Finding the Perimeter of a Triangle

Question:

A triangle has sides measuring 5 meters, 7 meters, and 9 meters. What is its perimeter?

Expert Answer:

The perimeter (P) of a triangle is the sum of its side lengths:

$$[P = 5\text{,m} + 7\text{,m} + 9\text{,m} = 21\text{,m}]$$

Explanation:

This straightforward addition reinforces understanding of perimeter as the total boundary length of a shape. Students should be comfortable adding multiple measurements and paying attention to units.

- Classifying an Octagon

Question:

A shape has eight sides of equal length and equal interior angles. What type of polygon is this?

Expert Answer:

The shape described is a regular octagon.

Explanation:

A polygon with eight sides is an octagon. When all sides and interior angles are equal, it is classified as a regular octagon. Recognizing properties of polygons helps students understand shape classification.

- Applying Surface Area Formulas

Question:

A cube has an edge length of 4 cm. What is its surface area?

Expert Answer:

Surface area (SA) of a cube is calculated using:

$$SA = 6 \times \text{edge}^2$$

Calculations:

$$SA = 6 \times (4\text{ cm})^2 = 6 \times 16\text{ cm}^2 = 96\text{ cm}^2$$
