Definition of the Electromagnetic Spectrum

The electromagnetic spectrum encompasses all types of electromagnetic radiation, which are waves of oscillating electric and magnetic fields traveling through space at the speed of light (approximately 299,792 kilometers per second). These waves differ in wavelength, frequency, and energy but share the fundamental characteristics of electromagnetic radiation.

Components of the Electromagnetic Spectrum

The spectrum ranges from very long wavelength, low-frequency radio waves to extremely short wavelength, high-frequency gamma rays. The main categories include:

- Radio Waves
- Microwaves

Properties of Electromagnetic Radiation

Wavelength and Frequency

- Wavelength: The distance between successive crests of a wave, usually measured in meters or nanometers.
- Frequency: The number of wave cycles that pass a point per second, measured in hertz (Hz).
