Trigonometric Function Graphs

Sample Question:

"Given the function $f(x) = 2 \sin(x) + 1$, sketch the graph and determine its amplitude, period, and phase shift."

Solution Outline:

- Amplitude: The coefficient of $\sin(x)$ is 2, so the amplitude is 2.
- Period: The period of $\sin(x)$ is 2π . Since there is no coefficient inside the argument, the period remains 2π .
- Phase shift: No horizontal shift since there is no addition/subtraction inside the sine argument.
- Vertical shift: The entire graph shifts up by 1 unit.

Answer Summary:

- Amplitude: 2
- Period: 2π
- Phase shift: None
- Vertical shift: Up by 1

Solving Trigonometric Equations

Sample Question:

"Solve for x in the interval $[0, 2\pi)$: $\sin(2x) = \frac{\sqrt{3}}{2}$."

Solution Strategy:

- Recognize that $\sin(2x) = \frac{\sqrt{3}}{2}$ corresponds to specific angles.
- Find the general solutions for $2x$:

$\{$

$$2x = \frac{\pi}{3} + 2k\pi \quad \text{or} \quad 2x = \frac{2\pi}{3} + 2k\pi, \quad k \in \mathbb{Z}$$

$\}$

- Solve for x :

$\lfloor$

$$x = \frac{\pi}{6} + k\pi \quad \text{or} \quad x = \frac{\pi}{3} + k\pi$$

$\rfloor$

- Find all solutions within $[0, 2\pi)$:

- For $(k=0)$: $(x=\pi/6, \pi/3)$

- For $(k=1)$: $(x=\pi/6 + \pi = 7\pi/6, x=\pi/3 + \pi = 4\pi/3)$

- For $(k=2)$: $(x=\pi/6 + 2\pi)$, which exceeds (2π) , discard.

- Similarly for $(k=1)$, solutions are within the interval.

Final solutions:

$\lfloor$

$$x = \frac{\pi}{6}, \frac{\pi}{3}, \frac{7\pi}{6}, \frac{4\pi}{3}$$

$\rfloor$

Question How do I find the value of a sine function given an angle in a worksheet? To find the sine of an angle, identify the angle measure (in degrees or radians), then use a calculator or

unit circle to determine the sine value. Make sure your calculator is in the correct mode (degrees or radians). What is the best way to evaluate cosine values without a calculator? You can use known special angles (such as 0° , 30° , 45° , 60° , 90°) and their cosine values, or apply the unit circle and symmetry properties of cosine to find the value. How do I find the value of a tangent function on a worksheet? Calculate the tangent by dividing the sine of the angle by the cosine of the angle ($\tan \theta = \sin \theta / \cos \theta$), using known values or calculator functions. What should I do if the worksheet asks for the reciprocal trig functions? Recall that cosecant, secant, and cotangent are reciprocals of sine, cosine, and tangent respectively. Use the basic trig values and take reciprocals as needed. How can I verify my trig function value from a worksheet? Use a calculator for approximate values, or cross-verify using the unit circle, special angle values, or known identities to ensure accuracy. What strategies can help me find trig function values for angles not listed in the worksheet? Use angle addition/subtraction formulas, reference angles, or known identities to find the value; or approximate using a calculator if exact values are not required. Why do some worksheet questions ask for exact trig values, and how do I find them? Exact values are based on special angles where the sine, cosine, and tangent values are known exactly (like 30° , 45° , 60°). Use the unit circle or known identities to find these exact values.
