Basic Concepts in Genetics: Foundational MCQs

Understanding fundamental principles is essential before delving into complex topics. Here are some typical MCQs that cover core concepts.

Question 1:

What is the primary molecule responsible for storing genetic information in living organisms?

- A) Protein
- B) Carbohydrate
- C) DNA
- D) Lipid

Answer: C) DNA

Explanation: DNA (Deoxyribonucleic acid) is the molecule that carries genetic information in most organisms. It encodes instructions necessary for growth, development, and reproduction. Proteins, while vital for cellular functions, are synthesized based on genetic information stored in DNA.

Question 2:

In a diploid organism, how many copies of each chromosome are present in somatic cells?

- A) One
- B) Two
- C) Three
- D) Four

Answer: B) Two

Explanation: Diploid organisms have two sets of chromosomes—one inherited from each parent. Somatic cells are diploid, containing homologous pairs of chromosomes, totaling two copies per chromosome.

Genetic Inheritance and Mendelian Principles

Mendelian inheritance forms the foundation of classical genetics. Understanding dominant and recessive traits, segregation, and independent assortment is crucial.

Question 3:

In a monohybrid cross between two heterozygous parents ($Aa \times Aa$), what is the expected phenotypic ratio in the offspring?

- A) 1:2:1
- B) 3:1
- C) 1:1
- D) 2:1

Answer: B) 3:1

Explanation: The cross $Aa \times Aa$ results in genotypic ratio 1:2:1 ($AA:Aa:aa$). Phenotypically, assuming complete dominance, the ratio is 3 dominant:1 recessive (e.g., tall:short plants).

Question 4:

Which of the following best describes Mendel's Law of Independent Assortment?

- A) Genes for different traits are inherited independently of each other.
- B) Genes for different traits are inherited together as a package.
- C) Each gene segregates independently during gamete formation.

Chromosomal Basis of Inheritance

Chromosomal behavior during meiosis underpins inheritance patterns. Understanding chromosome structure, linkage, and anomalies is essential.

Question 5:

Which phase of meiosis is primarily responsible for ensuring the independent assortment of

chromosomes?

- A) Prophase I
- B) Metaphase I
- C) Anaphase I
- D) Telophase I

Answer: B) Metaphase I

Explanation: During Metaphase I, homologous chromosome pairs align randomly at the metaphase plate, leading to independent assortment. This results in genetic variation among gametes.

Question 6:
