- This line is critical; a leak here results in increased brake pedal effort.

Step 3: Routing to EGR and Emissions Components

- The vacuum line from the intake manifold feeds into a vacuum control solenoid.
- From this solenoid, lines run to the EGR valve and other emission-related components.
- The solenoid is electronically controlled, opening or closing vacuum pathways based on engine operating conditions.

Step 4: HVAC Actuator Lines

- Multiple smaller lines originate from a vacuum manifold or distribution block.
- They connect to mode doors, blend doors, and other HVAC components.
- Proper sealing and routing are essential to prevent air leaks that cause climate control malfunctions.

Step 5: Cruise Control System

- A dedicated vacuum line runs from the intake manifold to a reservoir.
- From the reservoir, another line connects to the cruise control servo, enabling it to maintain speed.

Step 6: Vacuum Reservoir Placement

- Typically mounted on the firewall or inside the engine bay.
- Acts as a buffer, ensuring steady vacuum supply during engine load fluctuations.

Step 7: Control Solenoids and Valves

- Electrically operated, these control the vacuum flow based on signals from the vehicle's control modules.
- They are usually mounted near the intake manifold or firewall with accessible wiring and

vacuum lines.
