When kidney function declines, waste products and fluids can accumulate, leading to severe health complications such as anemia, bone disease, cardiovascular problems, and ultimately, kidney failure.

Stages of Kidney Disease

Chronic Kidney Disease (CKD) is classified into five stages based on the glomerular filtration rate (GFR):

- Stage 1: Normal or high GFR (>90 mL/min), with some signs of kidney damage.
- Stage 2: Mild reduction in GFR (60-89 mL/min).
- Stage 3: Moderate reduction (30-59 mL/min).
- Stage 4: Severe reduction (15-29 mL/min).
- Stage 5: Kidney failure or end-stage renal disease (GFR

Understanding the stage helps tailor treatment and coping strategies effectively.
