 - **Log(rate) vs. Log(concentration):** Slope indicates order.

Calculating Rate Constants

- Derived from the rate law equation:

\[

$$\text{Rate} = k [A]^m [B]^n$$

\]

- Use experimental data points to solve for k once the orders m and n are known.

Activation Energy via Arrhenius Equation

- The Arrhenius equation:

\[

$$k = A e^{-\frac{E_a}{RT}}$$

\]

- Plotting $\ln k$ vs. $1/T$ yields a straight line; the slope gives E_a .
